NUTRITION TIP FROM THE KSC FITNESS CENTER: Lactose Intolerance Doesn't Have to Mean Less Calcium. If you avoid milk and other dairy products because of bloating and intestinal discomfort, you may be missing calcium that you don't need to avoid. A recent study in the *Journal of the American Dietetic Association* looked at people who struggle with lactose intolerance and found that kefir, a fermented milk product, can improve people's lactose digestion and may be a good way to get much-needed calcium. Kefir, like yogurt, contains active bacteria cultures that help break down the lactose in the milk. That means people with intolerances can absorb the milk sugar without unpleasant consequences. Kefir is an all-natural, authentically cultured probiotic beverage similar in taste and texture to a drink-style yogurt but with twice the amount of "friendly bacteria." It is also an excellent source of calcium and vitamins D, B6, and B12. If you think you might have lactose intolerance, first keep track of when you eat dairy foods and how you feel. Review your findings with your physician and a dietetics professional, and consider slowly introducing kefir or yogurt into your eating plan.
